

Own technology for
real-time tracking

Datacom

INPROUS

Datacom

Our **Datacom** datalogger has been developed to provide cold chain real-time control. It monitors temperature, humidity, light and impact in a single compact device that incorporates communications and all sensors technology.

Alarms are fully configurable that are transmitted along with temperature and humidity measurements to a cloud platform in a Blockchain-compatible format.

Datacom can communicate via GPRS or NBloT and allows us to know its geo-position.

The device has internal backup data storage. It also has a high-capacity battery, rechargeable via a USB-C connector.

Commercial Information

Datacom is fully configurable through a secure digital card or through our mobile application that also allows you to update and download data in a very easy and intuitive way.

This datalogger is complemented by a data platform adapted to be useful to the needs of each customer.

Our sales department responsible for making all the individual proposals according to the characteristics of each project and guaranteeing the service.
